PROFESSIONAL SUMMARY

Aspiring AI Engineer and B.Tech undergraduate in Artificial Intelligence & Data Science (9.5 CGPA) with hands-on expertise in developing predictive models, Computer Vision architectures, and robust REST APIs. Proficient in Python, Scikit-Learn, NumPy, Pandas, and FastAPI. Demonstrates practical experience building real-time intrusion monitoring systems and deep learning classifiers with strong foundations in Data Structures and Algorithms.

EDUCATION

Arya College of Engineering & Information Technology (ACEIT) **Expected 2028**

Bachelor of Technology in Artificial Intelligence & Data Science (AI & DS) *Jaipur, India*

- **Academic Performance:** Cumulative Grade Point Average (CGPA): **9.5 / 10.0**
- **Relevant Coursework:** Machine Learning, Deep Learning, Data Structures & Algorithms (DSA), FastAPI Development, Database Management Systems (DBMS), Object-Oriented Programming (OOP).

TECHNICAL SKILLS

Programming Languages: Python, Java (Basics), SQL

Frameworks & Libraries: FastAPI, Scikit-Learn, NumPy, Pandas, TensorFlow / Keras (CNN), Matplotlib

Developer Tools: Git, GitHub, Postman, VS Code, Google Colab, Jupyter Notebook

Core Competencies: Machine Learning, Computer Vision, RESTful API Design, Object-Oriented Programming (OOP), Data Pipeline Preprocessing, Model Evaluation

WORK EXPERIENCE

Machine Learning Intern **Summer 2024 (45 Days)**

Acmegrade Pvt. Ltd. *Remote*

- Explored supervised and unsupervised learning algorithms including linear regression, logistic regression, decision trees, and clustering techniques on structured tabular datasets.
- Engineered automated exploratory data analysis (EDA) and data cleansing workflows utilizing Pandas and NumPy, handling missing values, outlier detection, and feature standardization.
- Trained and benchmarked baseline classification models using Scikit-Learn, evaluating performance metrics such as accuracy, precision, recall, and F1-score across validation sets.
- Collaborated with team mentors to implement modular Python code following OOP paradigms and version-controlled deliverables using Git and GitHub.

KEY PROJECTS

Intelligent API Intrusion & Abuse Detection System **Python, FastAPI, Spring Boot, Scikit-Learn, Postman**

- Architected an automated threat detection engine tailored for small-to-medium startups to monitor incoming API traffic and flag malicious payloads in real time.
- Implemented rule-based and predictive classifiers to identify SQL Injection (SQLi), brute-force authentication attacks, and excessive request rate anomalies across endpoints.
- Developed lightweight REST API endpoints in Python/FastAPI to parse request headers and query strings, simulating and validating payloads via Postman with sub-50ms latency.
- Designed integration hooks with Spring Boot backend services to facilitate automated IP rate limiting and logging of suspicious access attempts.

Handwritten Digit Classifier using Convolutional Neural Networks (CNN) **Python, TensorFlow, Keras, NumPy, Matplotlib**

- Constructed an end-to-end deep learning pipeline on the MNIST benchmark (70,000 images) featuring stacked 2D convolutional layers, ReLU activation, and 2×2 Max-Pooling operators.
- Normalized 8-bit grayscale pixel tensors (0–255 to 0.0–1.0) and reshaped 2D matrices into 4D tensor volumes `(N, 28, 28, 1)` to ensure spatial feature coherence.
- Optimized model training over 10 epochs using the Adam optimizer and Sparse Categorical Cross-Entropy, achieving a peak validation accuracy of **98.76%+**.
- Visualized epoch-wise loss and accuracy curves to monitor convergence and deployed single-sample inference pipelines to verify digit classification in real-time.
